- P-01 Measurements of gas and liquid viscosity using a microchannel
- P-02 Identification of Human Body Odor Components by Nanomechanical Sensors
- P-03 Dual domain acoustic olfactory discriminator
- P-04 A novel electrochemical disinfection technology; biofilm treatment in conductive and nonconductive surface
- P-05 Aminoacid based Electrochemical Biosensor for Pathogen detection
- P-06 An electrochemical biosensor for periodontal disease home diagnosis from saliva
- P-07 Gravity as a Cue to Control the Collective Cell Migration and Cluster Shape
- P-08 Development of epidermal growth factor nanoconjugates as anticancer drugs
- P-09 Development of visible light-responsive dynamic scaffold materials
- P-10 Cell under Stress: Probing Intracellular Force Dynamics using Atomic Force Microscope
- P-11 Functional Polymer Gels Based on Ultra-High Molecular Weight Polymers Toward Wearable Biomedical Sensors
- P-12 Insight on the effect of lysine-free mutations in epidermal growth factor on cellular cytotoxicity against the nanoparticle conjugates
- P-13 Bioinert and Bioactive Coatings for Medical Applications
- P-14 Synthesis of Supramacromolecular Microgels and their Effect on Cells
- P-15 pH-responsive Hydrogel formed by mixing Polymers with dynamic covalent Crosslinks based on Dioxazaborocanes
- P-16 Nanocarriers escaping from hyperacidified endo/lysosomes in cancer cells realize tumor-targeted intracellular delivery of antibodies
- P-17 Polymeric Micelles with pH-Responsive Cross-Linked Core for In Vivo mRNA Delivery
- P-18 Polymer-based Polyion Complex Micelles with Controlled Chain Flexibility Boost mRNA Delivery
- P-19 Discrete Softening of Biomaterial IPNs Through Orthogonal Enzymatic Degradation for Mechanobiological Studies
- P-20 Efficient mRNA delivery to brain capillary endothelial cells using lipid nanoparticles based on environmentally responsive lipids
- P-21 mRNA delivery to Secondary Lymphoid Tissues by Lipid Nanoparticles Loading Phosphatidylserine
- P-22 Leveraging biomaterials to understand melanoma aggressiveness from their migratory phenotypes
- P-23 Controlled Structure of Cell Sheets Using Micropatterned Smart Surfaces via Physical Polymer Coating Method
- P-24 Cell-sheet based meat: scaffold-free cultivated meat production
- P-25 Development of an artificial vascular bed using hydrogel to insert perfusable vascular networks into 3D tissues
- P-26 Development of ion biosensors based on passive wireless electricity feeding
- P-27 Controlling cell attachment/detachment by redox switches of antifouling conducting polymer
- P-28 In vitro electrochemical measurements of epithelial-mesenchymal transition induced by TGF- β
- P-29 Glycosylation induced poly(sarcosine) coacervate: the characterization and the encapsulation of substrates
- P-30 Anisotropic control of bone matrix texture formation on titanium substrate micropatterned with 2-methacryloyloxyethyl phosphorylcholine polymer
- P-31 Formation of nuclei during annealing impeded the supersaturation in the dissolution process of celecoxib glass
- P-32 Development of biomimetic mucus for evaluating mucus diffusion process of orally administered drug
- P-33 Development of Tissue-Adhesive Porphyrin for Locally Administered Photodynamic Therapy
- P-34 Composite Scaffolds of Gelatin, Anticancer Drug-Loaded Thermosensitive Liposomes and Gold Nanoparticles for Synergistic Chemotherapy and Photothermal Therapy
- P-35 Effect of viscosity on osteogenesis and adipogenesis of mesenchymal stem cells with controlled morphology
- P-36 Bifunctional Scaffolds for Magnetic hyperthermia of Breast Cancer Cells and Adipose Tissue Regeneration
- P-37 Development of A Surgical Adhesive based on Catechol Group-modified Alaska Pollock Gelatin
- P-38 Development of Tissue Adhesive Microparticles for Robust Closure of Post-endoscopic Submucosal Dissection Perforation
- P-39 Development of hotmelt tissue adhesives to prevent postoperative adhesion
- P-40 Self-assembled vaccines based on inosine pranobex and ferric ions for cancer immunotherapy
- P-41 Cerium Oxide-based Nanomaterials for Biomedical Applications
- P-42 Shape Memory Polymers: An innovative Tool for Materiobiology
- P-43 A Thermally Enhanced Drug Release Platform via Dynamic Covalent Chemistry
- P-44 Bone Tissue Reactions of anti-decay self-setting HAp/Col Paste
- P-45 Guanine-quadruplex structure enhances immunostimulatory activity of phosphodiester-based CpG oligodeoxynucleotides
- P-46 Switching of cytokine induction controlled by cationic liposome/guanine-quadruplex CpG oligodeoxynucleotides complexes
- P-47 Regulations of Cell Surface Reactions by Synthetic and Natural Macromolecules
