

NIMS-MPI workshop on Materials Aspects of Novel Quantum Systems

18th-21st of November 2025

- New Quantum and Functional Materials
- Synthesis & Crystal Growth Techniques
- Properties of New Exotic Materials

MANA Auditorium, NIMS, Tsukuba, Japan

Development of
novel quantum
and functional materials
will serve as a key milestone

towards future innovative devices and green technology. By bringing physicists, chemists and materials scientists together, we aim to exchange fresh ideas of materials design and synthesis, discuss unique properties and functions of new materials, and explore new directions of quantum and functional materials.

This workshop consists of keynote lectures, invited talks and poster presentations. The workshop is open for everyone and free of charge. **Participants with/without poster presentation are highly welcome**, and applicants should contact the organizers.
